## Education

---

**Bachelors of Science (BS) in Computer Science (CS)** 01/2022 – Present  
University of Sufism and Modern Sciences

## Projects

---

### WhatsApp Clone

- Developed a functional interface of WhatsApp, the popular chatting application, using Flutter framework.
- Implemented key features such as sending and receiving messages, supporting a dark mode for enhanced user experience.
- Integrated Firebase as the backend solution to handle real-time messaging and data synchronization.
- Utilized Flutter and Firebase technologies to build a robust and scalable messaging platform resembling WhatsApp.
- Successfully created a feature to simulate dummy calls within the application.

### Imaginary Business Website Development

- Led the design and development of a fully functional website for an imaginary business as part of a front-end development course.
- Utilized Figma to create visually appealing and user-friendly designs for the website's various sections.
- Developed the website using HTML and CSS, ensuring cross-browser compatibility and responsiveness.
- Implemented JavaScript to add interactive elements, enhancing user experience and functionality.
- Created a forum to streamline appointment bookings, simplifying the scheduling process for potential customers.

### Notes/To-Do List Application

- Developed a functional notes/to-do list application using JavaScript.
- Implemented features allowing users to add, edit, and remove notes and to-do items.
- Designed the application with a visually appealing interface, focusing on a user-friendly and intuitive design.
- Ensured smooth functionality and responsiveness of the application across different devices.
- Implemented features for organizing and categorizing notes and to-do items, enhancing productivity.
